### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicants amendments have overcome all previously relied upon prior art rejections. Specifically, Applicants have narrowed the scope of independent claim 1 to recite that the organic polymer (A1) is a polyoxyalkylene polymer and that the carboxylate (C) is tin neodecanoate. Such amendments are commensurate in scope with the experiments performed in the instant specification and the 1.132 Declaration filed on 11/1/10. Specifically, the use of tin neodecanoate, which is a catalyst in which the alpha carbon atom next to the carboxyl group is a quaternary carbon atom affords superior skin formation time when compared to a tin carboxylate in which the alpha carbon atom next to the carboxyl group is a tertiary carbon atom. The skin formation time is nearly twice as long when employing such a catalyst. There is nothing in the prior art which teaches or suggests that the nature of the curing catalyst would have such an effect. Last Ando et al. (US Pat. 6,703,442) was relied upon in the previous Office action to show that the use of a tin carboxylate wherein the alpha-carbon next to the carboxyl group is a quaternary carbon atom is obvious. However, Ando et al. does not actually disclose tin versatate amongst the tin catalysts taught therein. For these reasons, the instant claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
